EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science – Computing Systems Specialization, GPA: 4.0/4.0

Aug. 2022 – May 2024

Atlanta, Georgia

Indian Institute of Information Technology, D&M, Jabalpur

Bachelor of Technology in Computer Science & Engineering, (Gold Medalist), GPA: 9.4/10

Aug. 2016 – Jun. 2020

Other Awards: Academic Proficiency Medal (CSE), JENESYS Scholarship, Director's Medal in Games & Sports

Jabalpur, India

EXPERIENCE

Apple Inc.

Jul. 2024 – Present

Software Engineer

Cupertino, CA

- Built **distributed backend services** & automation frameworks powering **5+ RF technologies** (Bluetooth, NFC, UWB, WiFi, Cellular) for **validation, build verification & cross-team data workflows** across global engineering labs & factory production
- Engineered **async AI services** via **LLM multi-agent orchestration**, retry-on-failure handling, & **MCP servers** exposing internal data systems as AI-callable tools
- Managed **cross-functional team of 40+ developers** across timezones, coordinating offshore engineering resources, **driving technical direction** on tool development lifecycles, & aligning deliverables with Apple's engineering standards

Highlighted Projects:

- **RF Automation Platform** – Owned **mission-critical modules** validating regulatory compliance & RF performance, with multi-vendor instrument abstraction & S3-backed config sharing, powering **500+ daily test runs** across distributed labs
- **Visualization & Aggregation Service** – Architected **event-driven pipeline** across **8 microservices** (ingestion, validation, dedup, aggregation, storage), handling **~1K+ reports/day** with idempotent processing, serving a real-time dashboard
- **AI Document Parser** – Designed **orchestrator-worker LLM service** extracting complex power-table data from PDFs & Excels with schema-driven validation & SSE-streamed progress updates; cutting per-format onboarding from **2-3 weeks to ~1 day**
- **Engineering Workflow MCP** – Augmented **schema-aware Mongo querying** with **on-demand domain skills** (chipset-aware recipes, JOIN patterns, & formula derivations); saving **~50+ team-hours/week** spent on manual Tableau analysis

Apple Inc.

May 2023 – Dec. 2023

Software Engineer Intern

Cupertino, CA

- Spearheaded **full-stack R&D budget platform** replacing Excel-based PR/PO tracking, with tree-based RBAC, Snowflake-synced cron pipelines, cross-team buffer transfers, & inline-email approvals – saving **~250 delay-days/yr** + **~3 admin-hours/week**
- Developed **reusable extensible backend template** (auth, notifications, theming), accelerating new-app development by **40%**
- Engineered **5-stage cross-database migration pipeline** for a **major schema rewrite** of a mission-critical factory-automation system, executing incremental insert/update/delete across staged cutover

Zolo Property Solutions

Sep. 2020 – Jul. 2022

Software Development Engineer (Backend)

Bangalore, India

- Built **REST APIs** across **domain-driven microservices** serving **50,000+ tenants**, owning design through production
- Integrated **multiple third-party payment gateways** via **events & webhooks**
- Engineered **cross-database migration & data-cleaning pipelines** between **MongoDB and MySQL** across microservices

Highlighted Projects:

- Automated **legal paperwork** via **third-party e-signature integration** for tenant move-ins, saving **~20,000 papers** monthly
- Architected nationwide **distribution platform** via inventory tracking, stock transfers, tenant handouts across **200+ properties**
- Designed **cosine-similarity based roommate recommendation** algorithm, reducing compatibility complaints by **70%**
- Integrated **renumerative features** like duration-based exit fee & legal charges, **boosting \$10K+ monthly revenue** during COVID-driven hospitality downturn

Oracle

May 2019 – Nov. 2019

Software Engineer

Bangalore, India

- Architected **Java dispatcher framework** for Retail Cloud Applications enabling **parallel script execution** with automated email summaries, custom reporting, automated data extraction, post-run cleanup, & multi-customer testing
- Powered **post-outage validation & new-deployment checks** on production systems, cutting manual verification cycles by **90%**

IIT Bombay | Fundamental Research Group (FRG) | [github](#)

May 2018 – Jul. 2018

Project Intern, Ekalavya Summer Internship' 18, Prof. DB Phatak

Mumbai, India

- Implemented a **real-time notification system** with role-based subscriptions for the “Collaborative-Communities” content portal
- Adhered to Test Driven Development by implementing unit & integration tests to verify the correctness of the code | [github](#)

TECHNICAL SKILLS

Languages: Java, Python, SQL, C++, TypeScript, HTML/CSS

AI & Agentic: LangChain, MCP, SSE, Pydantic

Frameworks & Tools: Spring Boot, Reactive Spring, JPA/Hibernate, FastAPI, Django, React, Flask, OAuth2/OIDC, Rest Assured, JUnit

Data & Messaging: PostgreSQL, MongoDB, Neo4j, Elastic Search, ActiveMQ, Redis, Splunk

Cloud & Deployment: Gitlab CI/CD, Docker, K8s, Serverless(sls), AWS: Lambdas, API Gateway, S3, EventBridge
